

# Ignea Rs

Table grape variety.

## Origin

Ignea or 185 Pirovano was obtained by Angelo Pirovano (Italy) by crossbreeding 46 Pirovano and 2 Pirovano.

## Use

Table grape variety.

## Name of the variety in France

Ignea

## Synonymy

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

## Regulatory data

In France, Ignea was officially listed in the "Catalogue of vine varieties" on the A list.

## Description elements

The identification is based on:

- the tip of the young shoot with a high density of prostrate hairs,
- the green young leaves with bronze spots,
- the circular entire adult leaves, with an open V-shaped petiole sinus, small teeth with straight sides, no anthocyanin coloration, a slightly revolute, finely blistered leaf blade, and on the lower side of the leaves, no or a very low density of erect hairs and a low density of prostrate hairs,
- broad ellipsoid berries.

### Cultivation and agronomic skills

Ignea displays low to moderate vigor.

### Clonal selection in France

The only certified Ignea clone carries the number 1388.

### Phenology

Bud burst: 10 days after Chasselas.

Grape maturity: mid-season, 3 weeks after Chasselas.

### Technological potential

The bunches are medium to large in size, not very compact. The berries also are medium to large with a thick skin, fleshy pulp and a simple flavor. Ignea has a good storage and transport capacity.

### Susceptibility to Diseases and Pests

Ignea is fairly susceptible to grey rot, powdery and downy mildew.

### Debourrement

### Maturité
