

Arriloba B

Wine grape variety.

Origin

This variety was obtained in 1954 by INRA by crossbreeding Raffiat de Moncade and Sauvignon.

Use

Wine grape variety.

Name of the variety in France

Arriloba

Synonymy

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

Regulatory data

In France, Arriloba is officially listed in the "Catalogue of vine varieties" on the A list and classified.

Description elements

The identification is based on:

- the green young leaves with bronze spots,
- the adult leaves with three lobes (rarely five lobes), an open U-shaped petiole sinus, long teeth with straight sides, a moderate anthocyanin coloration of veins, a twisted, involute leaf blade, and on the lower side of the leaves, a low to medium density of erect and prostrate hairs,
- the round-shaped berries.

Cultivation and agronomic skills

This variety is vigorous, fertile and productive. It is sometimes susceptible to dessication of the stems and would appear well adapted to machine harvesting.

Clonal selection in France

The only certified Arriloba clone carries the number 762.

Phenology

Bud burst: 2 days after Chasselas.
Grape maturity: early-season, 1 week after Chasselas.

Technological potential

The bunches are medium in size and the berries are very small. The wines produced are quite fine and slightly aromatic.

Susceptibility to Diseases and Pests

Arriloba resists well to grey rot (thick skin).
