

Perlaut B

Table grape variety.

Origin

This variety was obtained in 1956 by INRA by crossbreeding Cinsaut and Perle de Csaba.

Use

Table grape variety.

Name of the variety in France

Perlaut

Synonymy

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

Regulatory data

In France, Perlaut is officially listed in the "Catalogue of vine varieties" on the A list. This variety is also listed in the catalogue of Portugal.

Description elements

The identification is based on:

- the tip of the young shoot with a medium density of prostrate hairs,
- the yellow young leaves with bronze spots,

- the circular adult leaves, with three or five lobes, a closed V-shaped petiole sinus or with slightly overlapping lobes, medium size, mucronate teeth with convex sides or one side concave and one side convex, a weak anthocyanin coloration of veins, a moderately blistered leaf blade, and on the lower side of the leaves, a low density of prostrate and erect hairs

- the round-shaped berries.

Cultivation and agronomic skills

Perlaut displays a low to moderate vigor and has a semi-erect to horizontal bearing. This variety must be trained and can be pruned short or long.

Clonal selection in France

The only certified Perlaut clone carries the number 502.

Phenology

Bud burst: 1 day before Chasselas. Grape maturity: very early season, 1 week before Chasselas.

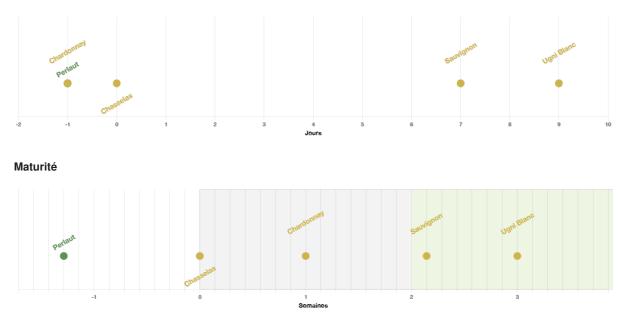

Debourrement

Technological potential

The bunches are medium in size, supple and not very compact. The berries are also medium in size with a thin skin and juicy pulp. They tend to shrivel when over-ripe. This variety has a bad storage and transport capacity.

Susceptibility to Diseases and Pests

Perlaut is not very susceptible to grey rot.
