

# Valérien B

Wine grape variety.

## Origin

Valérien (an interspecific hybrid) corresponds to 23410 Seyve-Villard. Its origin is unknown.

## Use

Wine grape variety.

## Name of the variety in France

Valérien

## Synonymy

In France, this variety can officially be called "23410 Seyve-Villard" regarding plant propagation material.

## Regulatory data

In France, Valérien is officially listed in the "Catalogue of vine varieties" on the A list and classified. This variety is also listed in the catalogue of Romania.

---

## Description elements

The identification is based on:

- the tip of the young shoot with a low density of prostrate hairs,
- the green young leaves,
- the circular adult leaves, with three lobes, a slightly open U-shaped petiole sinus, medium to large teeth, not numerous, short compared to their width at the base with convex sides, a thick, slightly goffered leaf blade, and on the lower side of the leaves, a low density of erect hairs,
- the round-shaped or obovoid berries.

Allele 1	0	0	0	0	0	0	0	0	0
Allele 2	0	0	0	0	0	0	0	0	0

### Cultivation and agronomic skills

Valérien is very vigorous and has a semi-erect bearing. The shoots are sensitive to the wind. Valérien is fairly fertile and can be pruned short or moderately long. It is susceptible to coulure.

### Clonal selection in France

There is no certified clone for this variety yet.

### Phenology

Bud burst: 7 days after Chasselas.

Grape maturity: mid-season, 2 weeks and a half after Chasselas.

### Technological potential

Valérien's bunches are medium in size, not very compact, cylindrical-shaped and the berries also are medium in size.

### Susceptibility to Diseases and Pests

Valérien is moderately resistant to downy mildew and it must be grafted.

Despite the tolerances described, a minimum level of fungicide protection is necessary to provide adequate protection for the vines and the grape harvest, particularly in vintages with high disease pressure.
