

New

Recybel B

Grape variety intended for the production of fruit juices.

Origin

Recybel is an interspecific hybrid obtained by INRA in 1990. It results from the crossbreeding of Madina and a descendant of *Muscadinia rotundifolia*.

Use

Grape variety intended for the production of fruit juices.

Name of the variety in France

Recybel

Synonymy

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

Regulatory data

In France, Recybel is officially listed in the "Catalogue of vine varieties" since 2020 on the A list.

Description elements

The identification is based on:

- the tip of the young shoot with a very low density of prostrate hairs,
- the green young leaves with bronze spots and no prostrate hairs,
- the shoots with long red or red-striped internodes,
- the small to medium, circular, dark green adult leaves, with three or five lobes, a slightly open V-shaped petiole sinus, small teeth, long compared to their width at the base with straight sides or with one side concave and one side convex, a very weak or weak anthocyanin coloration of veins, a shiny, smooth, revolute leaf blade, and on the lower side of the leaves, no erect and prostrate hairs,
- the obloid round-shaped berries.

Genetic profile
