Allele 2	149	234	249	178	247	248	247		

## Cultivation and agronomic skills

Négret de la Canourgue has a semi-bearing, moderate vigor, and looks like its leaves have been thinned out. Its yield can be irregular. Its clusters are compact, and it tends to produce a lot of grappillons. This grape variety is not very prone to coulure, but it is quite sensitive to water stress and high temperatures. It used to be grown in areas with harsh climates.

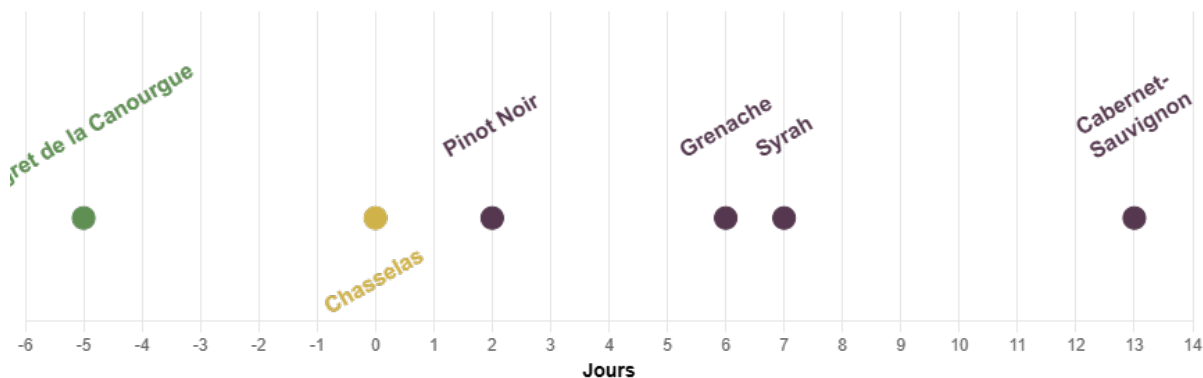

## Clonal selection in France

There is no certified clone for this variety yet.

## Phenology

Bud burst: 5 days before Chasselas.

## Debourrement
