

# Carla N

Table grape variety.

## Origin

This variety was obtained in 1958 by l'INRA by crossbreeding Cardinal and Alphonse Lavallée.

## Use

Table grape variety.

## Name of the variety in France

Carla

## Synonymy

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

## Regulatory data

In France, Carla is officially listed in the "Catalogue of vine varieties" on the A list.

## Description elements

The identification is based on:

- the tip of the young shoot with no or very little prostrate hairs,
- the reddish young leaves,
- the circular or wedge-shaped adult leaves, with three or five lobes, an open or slightly open U-shaped petiole sinus, short teeth with straight sides, moderate anthocyanin coloration of veins, a smooth, twisted leaf blade, and on the lower side of the leaves, a low to medium density of erect hairs, and no prostrate hairs,
- the broad ellipsoid berries.

## Genetic profile

	MicrosatelliteVVS2	VVMD5	VVMD7	VVMD27	VRZAG62	VRZAG79	VVMD25	VVMD28	VVMD32
Allele 1	133	234	249	176	186	252	254	243	271
Allele 2	133	236	255	182	204	256	254	267	271

### Cultivation and agronomic skills

Carla is moderately vigorous with a semi-erect bearing. It must be trained and pruned short or moderately long. It is not very susceptible to coulure and millerandage.

### Technological potential

Carla's bunches are large. The berries are also large, with seeds and are sometimes heterogenously colored. The skin is fairly thin and the pulp is firm. The flavor is slightly aromatic.

### Clonal selection in France

The only certified Carla clone carries the number 972.

### Susceptibility to Diseases and Pests

Carla is very little susceptible to grey rot.

### Phenology

Bud burst: 1 day after Chasselas.

Grape maturity: early-season, same as Chasselas.

### Debourrement

### Maturité
