---

## Description elements

The identification is based on:

- the yellow young leaves,
- the large circular adult leaves, entire or with three lobes, with a closed petiole sinus with overlapping lobes, medium teeth with straight sides, no anthocyanin coloration of veins, a revolute, roughly blistered and gophered leaf blade, and on the lower side of the leaves, a low density of erect and prostrate hairs,
- the slightly ellipsoid berries.

Allele 2	131	223	243	182	188	256	266	257	261

### Cultivation and agronomic skills

Colombaud is very vigorous and is fertile when pruned short. Its shoots are semi-erect. This variety it is only adapted to very hot and not very fertile terroirs.

### Clonal selection in France

The only certified Colombaude clone carries the number 1313.

Surveys have recently been carried out in the wine-growing region of Provence.

### Phenology

Bud burst: 8 days after Chasselas.

Grape maturity: late-season, 4 weeks after Chasselas.

### Technological potential

The bunches and berries are large. Colombaude produces dry, clear and acidic white wines.

### Susceptibility to Diseases and Pests

Colombaude is fairly susceptible to fungal diseases, particularly to grey rot.

### Debourrement

### Maturité
